The information contained in this handout has been compiled from industry standard text books, IBM manuals, and information in the public domain.

The presentation outline, subject matter, and exercises for this courseware were developed by Linda Bliden, Mike Chudasama, Ray Morrison, Paul Olson, and David Silverberg. It has been reviewed and edited by David Shapiro.

Syntax and reference to the GOTO statement in this mainframe COBOL Programming courseware is as a single term and word. For purposes of historical accuracy and backward compatibility, reference to the GO TO statement in the Structured COBOL courseware is two words. Dataset is spelled consistently as a single word; the exceptions are its utilization in menus and utilities by IBM and commercial software companies which in certain situations refer to it as a single term comprised of two words - data set. For example, Linear Data Set.

COBOL and mainframe training aids can be downloaded from:
