

16 MB Line - RMODE31 7:6
 3380 and 3390 Characteristics 1:14
 3380 Characteristics 1:14
 3390 Characteristics 1:14
 3390 Device: Physical Records Per CI Size 3:1

A

ACCESS is Dynamic 6:3
 ACCESS is Random 6:3
 ACCESS is Sequential 6:3
 Access Method Services 10:16
 AIX: Alternate Index 1:11
 ALLOCATE - Defining a Temporary VSAM Dataset 10:21
 Allocate a New Dataset 10:22
 Allocate a Partitioned Dataset Extended 10:22
 Allocate a VSAM Dataset 10:21
 ALTER 4:9
 ALTER Command to Rename Datasets 10:19
 Alternate Index - Building 10:7
 Alternate Index - Format 5:3
 Alternate Indexes 5:3
 Alternate Indexes and Paths 5:1
 Alternating Between Processing Options 6:2
 AMORG Parameter 10:12
 AMP Parameter 10:12
 AMS DEFINE CLUSTER Level: Tuning 4:1
 AMS Utility 4:1
 AMS Utility - Command Syntax 4:1
 Assembler Statistics: SHOWCB Macro 8:4
 Average Key Entry Length: Calculating 9:10
 AVGREC Parameter 10:13

B

BLDINDEX 5:2
 BLDVRP: Build VSAM Resource Pool 7:4
 Buffer Parameters in the DEFINE Syntax 4:29
 Bufferpools 7:6
 Bufferpools: Sizes 7:6
 Buffers 4:26

C

CA Performance Considerations 3:4
 CA Split 2:9
 CA Splits 2:15
 CA: Control Area 1:6
 CAs and Device Characteristics 3:2
 Catalog Entry - Information Contained 8:1
 CI and CA Splits 2:9
 CI and CA Splits - Costs 2:14
 CI and CA Splits During Direct Processing 2:10
 CI: Control Interval 1:3
 CI: Data and CI: Index - Sizing Recommendations 3:6
 CI FREESPACE: Calculation 4:4

CI Split.....	2:9
CIs and Physical Blocks.....	3:1
Compressed Data.....	10:6
Constraint Relief - Allocation.....	3:5
Control Areas.....	10:5
Control Field.....	1:6
Control Interval Control Information.....	1:5
Control Interval Size.....	3:6
Control Intervals.....	10:4
Costs After Split.....	2:15

D

DASD Response Time.....	1:15
Data - Adding to and Removing from the Data Component.....	2:8
Data Component of a KSDS - Calculating Space.....	10:18
Data is Added to and Removed from the CI - How.....	2:8
Dataset - Defining with JCL.....	10:8
Dataset Processing.....	10:14
Dataset Size.....	10:3
Datasets Assigned to LSR.....	7:5
Datasets: Events.....	8:3
Datasets: Statistics.....	8:3
Datasets: Statistics and Events.....	8:3
DD Parameters - Other.....	10:13
DD Parameters without SMS.....	10:11
DD Statement Parameters.....	10:10
DEFINE Activity - After.....	8:2
DEFINE CLUSTER.....	8:5
DEFINE CLUSTER for the KSDS: Critical Parameters.....	4:3
DEFINE Syntax - Buffer Parameters.....	4:29
Device Characteristics and CAs.....	3:2
Direct Access.....	4:28
Direct Processing.....	4:12, 6:1
Direct versus Sequential Processing.....	4:12
Distort Capacity Estimates - Long Keys.....	2:7

E

ERASE versus NOERASE.....	4:23
ESDS: Entry Sequenced Dataset.....	1:8

F

File Structures.....	1:7
Free Control Interval Pointer List.....	9:9
Free Control Interval Pointers.....	9:5
Free Space: Optimal Percentage of Choosing.....	4:7
FREESPACE.....	4:3
Freespace - Concept.....	2:16
FREESPACE in the CA.....	4:6
FREESPACE in the CI.....	4:4
FREESPACE: Changing Values from Area to Area of a KSDS.....	4:10
FREESPACE: Distribution Techniques.....	4:10
FREESPACE: Preserving or Restoring - When Moving a KSDS.....	4:11
FREESPACE: Reducing CI and CA Splits - Requirement.....	4:11
Front Compression.....	9:2

G

Generic Keys: Using 6:6

H

History of VSAM 1:2
 How Data Resides in the CI 1:4

I

I/O at Time of Split 2:14
 I/O Chart Per Processing Option 6:5
 Inaccurate Estimates - Effects 4:19
 Index CI Capacity 2:6
 Index CI Size: Appropriate Selection 4:15
 Index CI Sizes 2:6
 Index CI Sizes - Choosing: Recommendations 4:15
 Index Control Interval Size: Selecting 4:13
 Index Entries: Spanned Records 9:6
 Index Entry Format 9:2
 Index Header: Fields 9:4
 Index Levels and Physical I/O's 1:14
 Index - Levels and Organization 2:3
 Index Record 9:1
 Index Record: Analyzing - Index Record Components 9:7
 Index Record - Length 9:7
 Index Record Structure 2:5
 Index Record Type Indicator 9:8
 Index Records Test Cluster: Reanalyze 4:14
 Index - Structure 2:3
 Integrated Catalogs and Space Management Consolidation 1:2
 Integrity Parameters 10:17

J

JCL AMP Parameter - Parameters 4:31

K

Key Compression 9:2
 Key Entry Control Information - Length 9:7
 Key Entry Vertical Pointer - Length 9:8
 KEYRANGE Parameter 4:20
 KSDS File Structure 2:1
 KSDS: Key Sequenced Dataset 1:7

L

Large Control Areas 4:16
 Large Control Areas: Advantages 4:16
 Large Control Areas: Disadvantages 4:16
 Large Index CIs Increase Data Transfer Times and Buffer Requirements 4:15
 LDS: Linear Dataset 1:9
 LISTCAT 8:1
 Long Keys Can Distort Capacity Estimates 2:7

L (continued)

LSR: Advantages 7:5
 LSR: Local Shared Resources..... 4:34, 7:3
 LSR: Local Shared Resources - Guidelines 4:36
 LSR: Local Shared Resources - Restrictions..... 4:36
 LSR: Local Shared Resources - Rules of Use..... 4:35
 LSR Pool: Defining..... 7:3

M

Maximizing Random: Access Efficiency 4:28
 Maximizing Sequential Efficiency..... 4:27
 Mode Request in COBOL Programs..... 6:3
 Multiple Cylinder Datasets 4:19

N

New Index Record Identifier..... 9:7
 NOWRITECHECK..... 4:25
 NSR Datasets: Tuning 7:1

O

OPEN EXTEND 6:4
 Operational Parameters 4:22
 Optimizing CA: Control Area Size 3:3
 ORDER Parameter 4:20
 Organization of VSAM..... 1:12

P

Parameter Description 10:16
 Parameters..... 4:2, 10:11
 Parameters in the JCL AMP Parameter..... 4:31
 Paths 5:5
 Performance Monitoring..... 8:2
 Performance Parameters 10:17
 Physical Components 1:3
 Processing Options - Alternating Between 6:2
 Processing - VSAM Datasets..... 10:1

R

Rear Compression 9:3
 Record Definition Field..... 1:6
 Reorganizing Files for Continued Performance - Tools..... 8:5
 REPRO..... 4:8, 8:6
 REPRO Command for Copying a VSAM Dataset..... 10:20
 Reset Action 4:23
 Reusable Files 4:23
 RRDS: Relative Record Dataset..... 1:8

S

Separate Index CI Sizes from Data CI Sizes 4:15

Sequential Access..... 4:27

Sequential Processing 4:12, 6:1

Sequential versus Direct Processing Choices 6:1

SHAREOPTIONS: Impact..... 4:24

Single Set of Access Method Programs 1:2

Sizing Recommendations: CI: Data and CI: Index 3:6

Small Dataset..... 4:18

SMS - Avoid Parameters with VSAM Datasets..... 10:11

Space Acquisition - Rules 4:18

Space Allocation and Physical Placement..... 4:18

Spanned Records 4:17, 10:5

Speed versus Recovery 4:22

String Calculation 7:7

String Level: Lookaside Activity 7:2

String Processing: Preparing 4:32

String: Purpose and Function 7:7

Strings 7:7

Strings - Adding: Data and Index Buffers..... 7:2

Strings: How Specified 7:9

Strings: Problem Diagnosis..... 7:10

Strings: When to Release 7:8

Structural Parameters 4:3

T

Temporary Dataset Names 10:15

Test Cluster: Load with Data Records 4:13

Test Cluster: Redefining..... 4:13

Transactional Recovery 6:9

U

Uneven Insert Activity: Anticipating..... 4:8

Unused Space - Index Record 9:9

Upgrade Set..... 5:2

V

Volume Assignment 4:20

Volume Parameter: Data and Index..... 4:21

VSAM - History..... 1:2

VSAM Buffer Handling - Direct Access..... 4:28

VSAM Buffer Handling - Mixed Access..... 4:29

VSAM Buffer Handling - Sequential Access 4:27

VSAM Buffering..... 2:2

VSAM Data Formats 10:2

VSAM Dataset Definition with JCL..... 4:30

VSAM Dataset with SMS - Creating 10:9

VSAM Datasets - Processing..... 10:1

VSAM DD Statements..... 10:8

VSAM File Integrity 4:25

VSAM File Structure Comparison 1:13

VSAM: Organization..... 1:12

VSAM Performance: A Definition 1:1

VSAM Record-level Sharing: Administering 6:7

V (continued)

VSAM Record-level Sharing: Preparing 6:7
VSAM RLS: Determining Which Applications Can Use 6:8
VSAM Structure 1:7
VSAM's Key Compression Rate: Calculating 9:7

W

Wasted Data CIs - Eliminating 4:15
WRITECHECK 4:25
WRITECHECK versus NOWRITECHECK..... 4:25

X

XPORT/IMPORT 8:6
