VSAM is a registered trademark of IBM Corporation.

The content in this handout has been compiled from textbooks, IBM and third party software company documentation, and information in the public domain. Organizations having SYS-ED conduct VSAM Performance and Tuning training will be required to have a licensed version of the software.

For purposes of consistency, the single word dataset is used for defining terms, and explaining concepts in this courseware. Our research and experience with the software indicates that IBM and third party software companies make reference to both dataset and data set in the software and its reference manuals.

The presentation outline, content, and workshops for this course was developed by Judy Astroff, Linda Bliden, Karen Schwartz, and David Silverberg. It has been reviewed by David Shapiro.

Mainframe training aids can be downloaded from:

<http://www.sysed.com/shared/refcards.asp?maincat=mainframe>

Technology updates and answers to information technology questions are distributed at:

<http://www.vsamtrainingbysysed.us>
